Stage Cross

On-line resource instructions.

This learning resource is a game designed for use on the interactive whiteboard. There are two versions. One version asks addition questions the other asks multiplication questions up to 12 X12.

It could be used with small class groups as a starter or a reward activity.

The objective is to allow the character holding on to the balloons to cross the stage. Once the Go button is pressed the character will drift across the stage. A board with a maths question and a ticking timer will then lower. The correct answer must be entered by the time the time runs out. One balloon will then burst for each point of difference between the correct answer and the given answer. Once all the balloons are burst it is game over. If the character reaches stage right before running out of balloons the game is won.

Answers are to be entered using the numbers across the bottom of the board. Tapping the question board will clear any answer already entered.
