Equivalent Fractions

On-line resource instructions.

This learning resource helps compare which fractions are bigger, smaller or equivalent. The fractions are shown on a pulley system. The larger fraction will hang below the smaller one. When they are equal they will be at the same level. Below each fraction is shown its decimal value.

Buttons

The buttons are all contained with the two separate panels on the left and right. Each corresponds with the fraction it is closest to. Increase and decrease the numerator and denominator. The resource will immediately respond by balancing the tiles. Improper fractions are not possible; you are not able to increase the numerator to be equal to or greater than the denominator. The denominator cannot be made equal to or less than the numerator.
